About PAGID Racing

PAGID Racing is the exclusive motor-sport brand of the TMD Performance. As a member of the TMD Friction Group, TMD Performance is the world-wide sole distributor of PAGID Racing products and high performance brake pads for street legal cars.

The brake products are designed to produce the highest possible performance levels over a wide range of operating conditions, and are available in many different material formulations. They fit most popular

racing and high performance calipers and also may be fitted as an upgrade to many standard calipers for high performance cars.

In addition, PAGID Racing brake products are fitted as original equipment to some of the most prestigious and powerful production cars in the world including Audi, Bugatti, Ferrari and Porsche.

With the facilities in Leverkusen & Essen (Germany) and Troy (USA), TMD Performance is one of only a small number of companies capable of developing and manufacturing brake friction solutions according to customer-specific technical requirements in a short time.

PAGID Racing History

...

2019

Triple victory and seven class wins for PAGID Racing teams in the 24-hour race at the Nürburgring. The #912 Porsche 911 GT3 R of Manthey Racing secures the prestigious overall win.

Liqui Moly Team Engstler seals the fourth consecutive Teams' and Drivers' titles in the TCR Asia Series. Luca Engstler is the 2019 TCR Asia Champion.

2018

K-PAX Racing claims the Pirelli World Challenge GT Team Championship.

FIA Formula 3 World Champion Dan Ticktum, Motopark Academy

2018

2018

PAGID Racing celebrates 30 years THE DIFFERENCE IN BRAKING.

2017

2016

Historic quadruple victory at the 24h Race-Nürburgring: the AMG-Team BLACK FALCON was victorious with its #4 Mercedes-AMG GT3. In total, seven teams relying on PAGID Racing brake performance made it into the top ten.

11/11/2015

TMD PERFORMANCE
A NISSHINBO GROUP COMPANY

bt Bremsen Technik GmbH becomes **TMD Performance GmbH**

2010

TMD Friction owns 100 % of PAGID Racing

...

Following the sale of BBA Group's automotive friction business, TMD Friction is born. TMD Friction grows into one of the world's leading friction manufacturers and provided a home for PAGID Racing.

PAGID Racing became the official brake pad of the new Porsche Carrera Cup. A strong co-operation for almost a quarter of a century.

First "coloured pads" yellow, red, orange and blue give the teams and drivers an easy recognition – a **premiere in motorsports**.

Start of brake pads delivery for the first Porsche 944 Turbo Cup

Foundation of bt Bremsen Technik GmbH, the products specially for competition use are sold under the name PAGID Racing Brake Pads.

Presswerk AG (PAG) manufactures furniture related products in Essen, Germany. They are also commissioned to produce brake friction materials for, the HermanKirchbach'schen Werke in Coswig.

2000

2000

PAGID Racing develops the first brake pad for patented carbon ceramic brake discs for high-performance production cars.

Thus, in 2000, the Porsche 996 GT3 and the Mercedes-Benz CL 55 AMG "F1 Limited Edition" become the world's first road-legal cars to be equipped with ceramic brake discs and PAGID Racing brake pads.

1990

1988

Carlos Sainz is one of the first driver who used PAGID Racing in a rally.

1988

Driven by Germans Hans Joachim Stuck and Walter Röhrl, Audi's entry into the Trans-Am series was courtesy of the manufacturer's 200 turbo Quattro. Equipped with PAGID's racing brake pads, the team won six out of 13 races in 1988.

1988

1987

01/10/1987

1953

Under the brand name Pagid, the PAG company starts to market their own friction products for commercial vehicles and trailer applications. Over the following years, Pagid grows into a renowned brand name, not least known for its expertise in high performance and racing vehicles.

1925

1878

Early brakes were little more than wooden blocks with simple levers. The development of vehicle braking as we know it today began when Walter Willson Cobbett Ltd realized their woven belting could be easily adapted and used as friction material to bring motor cars to a stop.

Quality and Performance

+ MAXIMUM PERFORMANCE

We are proud of the performances of our products and are the absolute benchmark in many areas. For us performance means coordination of the product characteristics friction level, fade resistance, disc wear and modulation.

+ SAFETY

Safety is our top priority. Early in the development of our products we set absolute priorities. For example, the brass studs that are welded to the base plate provide a much stronger anchoring of the friction material to the base plate – even under the most extreme conditions.

+ TEST & INNOVATION

Our products are constantly subjected to the most challenging real world test – not only to guarantee consistent performance and durability, but also to continuously refine and develop our products in lab testing, we use our computer-assisted systems to duplicate the toughest tests on different race courses all over the world.

+ OE COMPETENCE

Our efficiency is also documented by numerous original equipment partnerships. Besides, manufacturers like Aston Martin and Mazda rely on our performances and reliability.

100 % QUALITY

All PAGID Racing products are produced using the most modern technical procedures. Our uncompromising production requirements provide consistent quality at the highest level.

TRUST & SUCCESS

For decades our worldwide partners and teams have trusted our products and every year have been rewarded with numerous victories and championships. There have been some races where more than half the participants have competed using our products. Performance creates trust!

BEDDING IN SERVICE

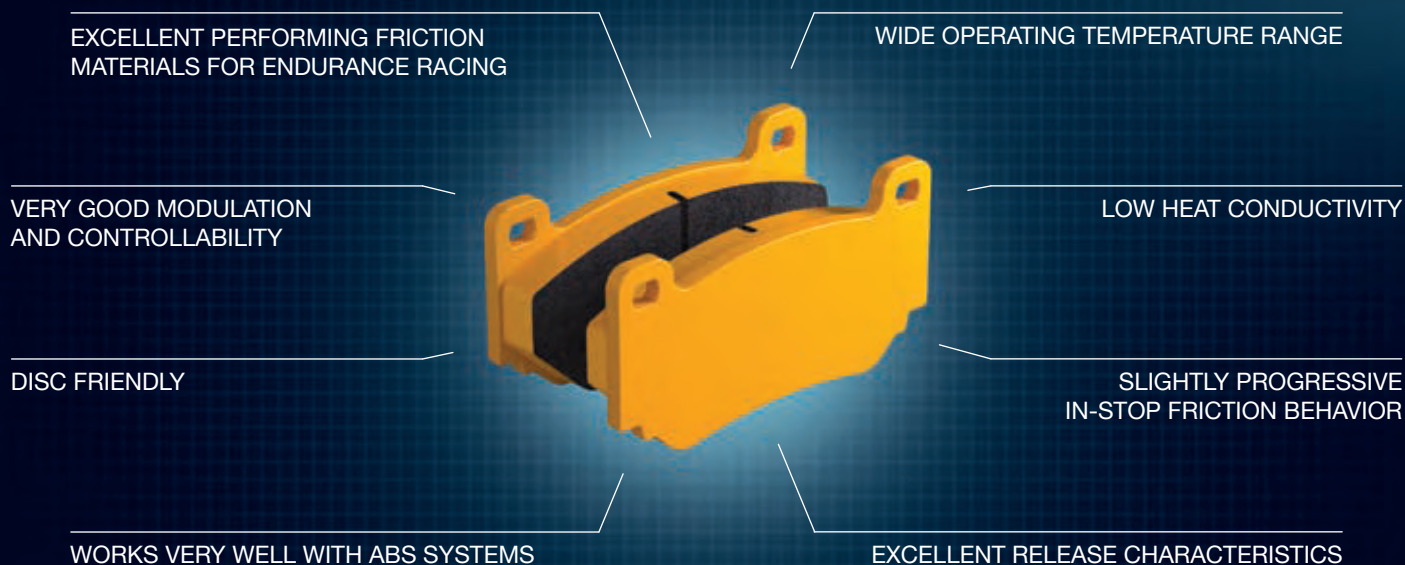

Our racing brake pads and discs are available "ready to race", perfectly bedded-in on our dedicated computerized system.

ENDURANCE RACING BRAKE PADS

AVAILABLE RSL RACING BRAKE PAD COMPOUNDS

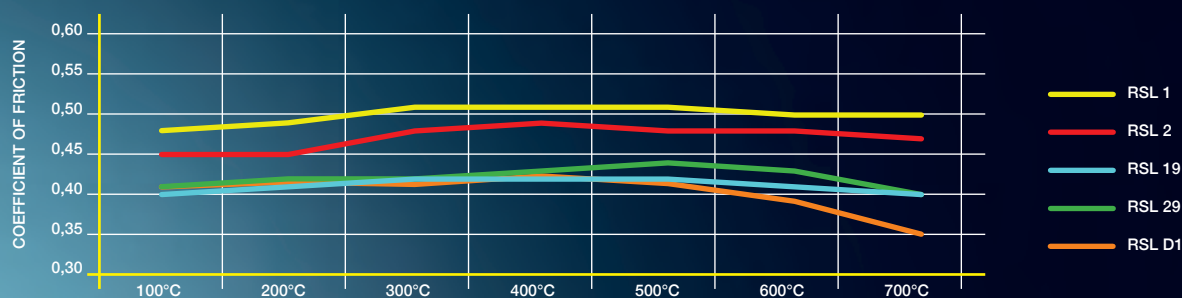

RSL 1	RSL 2	RSL 19	RSL 29	RSL D1
-------	-------	--------	--------	--------

The available specifications can be found in our detailed product listings from page 85. PAGID Racing RSL compounds are developed to comply with the latest requirements in endurance racing and meet or surpass all current ecological standards of the automotive industry.

BEDDING IN SERVICE

You can also acquire our Racing Brake Pads 'ready to race', perfectly bedded in on our computer system. Further information can also be found on page 40. Please ask your dealer about our 'Bedding In Service'.

FRICTION vs. TEMPERATURE RSL

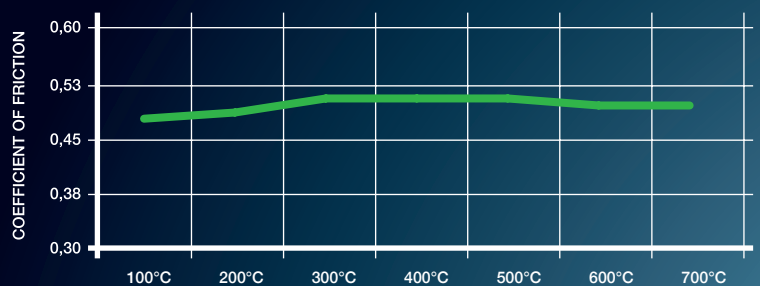

+ HIGH FRICTION COEFFICIENT

+ LONG PAD AND DISC LIFE

+ GOOD FRICTION STABILITY VS. TEMPERATURE

FRICION vs. TEMPERATURE RSL 1

APPLICATION RANGE

Used in GT cars, Touring cars and prototype endurance racing. Due to the high friction and good modulation, often used in sprint races as well.

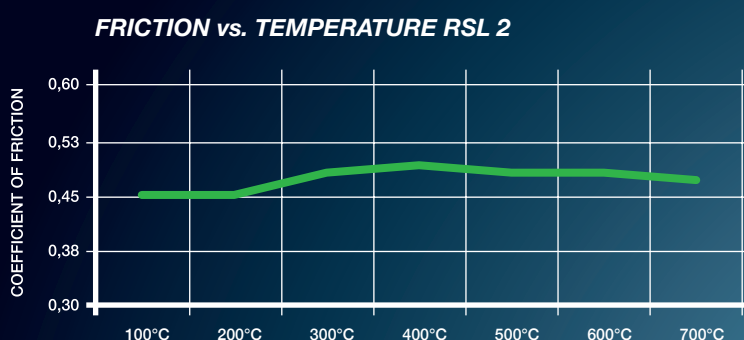

DESCRIPTION

RSL 1 is a low metallic resin bonded material containing steel and aramid fibers with high heat resistance. It maintains a constant friction level over a wide range of temperatures. Its low wear rate and disc friendliness make this material appropriate for endurance races.

- + MEDIUM HIGH FRICTION COEFFICIENT**
- + LONG PAD AND DISC LIFE**
- + EXCELLENT FRICTION STABILITY VS. TEMPERATURE**

APPLICATION RANGE

GT cars, Touring cars and prototype endurance racing. Due to excellent modulation characteristics often also used in sprint races.

DESCRIPTION

RSL 2 is based on the RSL 1 compound but has been further improved in terms of pad and disc life as well as friction stability vs. temperature. It is a low metallic resin bonded material containing steel and aramid fibers. Furthermore, it maintains a constant friction level over a wide range of temperatures.

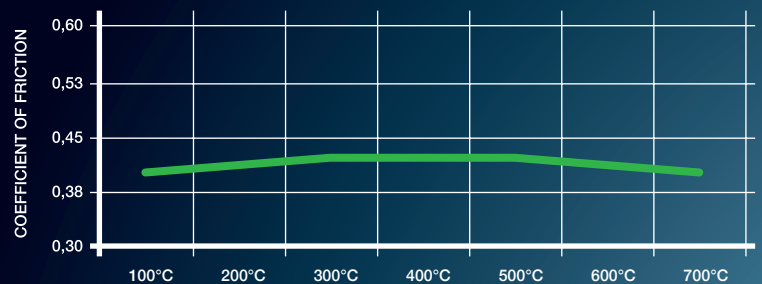

+ MEDIUM FRICTION COEFFICIENT

+ STABLE IN-STOP FRICTION

+ VERY DISC FRIENDLY AND LONG PAD LIFE

FRICITION vs. TEMPERATURE RSL 19

APPLICATION RANGE

Rear axle usage in combination with RSL 1 and RSL 2 on the front axle in heavier cars (GT3/GTE). Front axle usage for lighter GT and Touring cars.

DESCRIPTION

RSL 19 is a low metallic resin bonded material containing steel and aramid fibers. It maintains a constant friction level across a broad range of temperatures. The material features very good modulation and release characteristic.

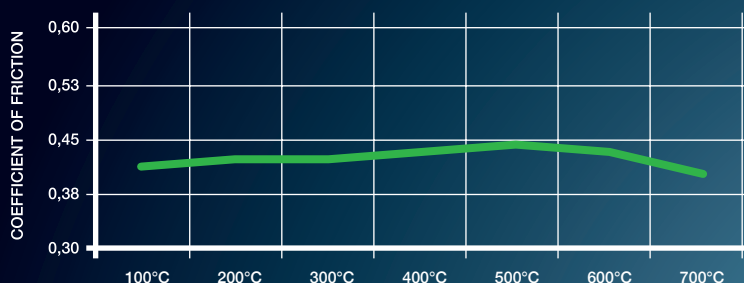

+ MEDIUM FRICTION COEFFICIENT

+ LONG PAD AND DISC LIFE

+ EASY BEDDING

FRICTION vs. TEMPERATURE RSL 29

APPLICATION RANGE

Very popular in club racing and track days. GT cars, Touring cars and prototype endurance racing. Due to excellent modulation characteristics also often used in sprint races.

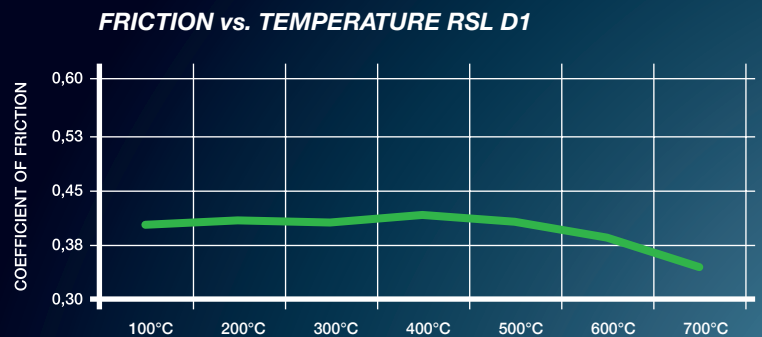

DESCRIPTION

RSL 29 features very good modulation and release characteristics. It is a low metallic resin bonded material containing steel and aramid fibers. The friction level of the material maintains constant at a low-medium level. Another advantage is the easy bedding in behavior.

- + REAR AXLE COMPOUND**
- + DIGRESSIVE INSTOP BEHAVIOUR**
- + GOOD INITIAL BITE**
- + LONG PAD & DISC LIFE**
- + LOW FRICTION LEVEL**
- + GOOD FRICTION STABILITY VS. TEMPERATURE**

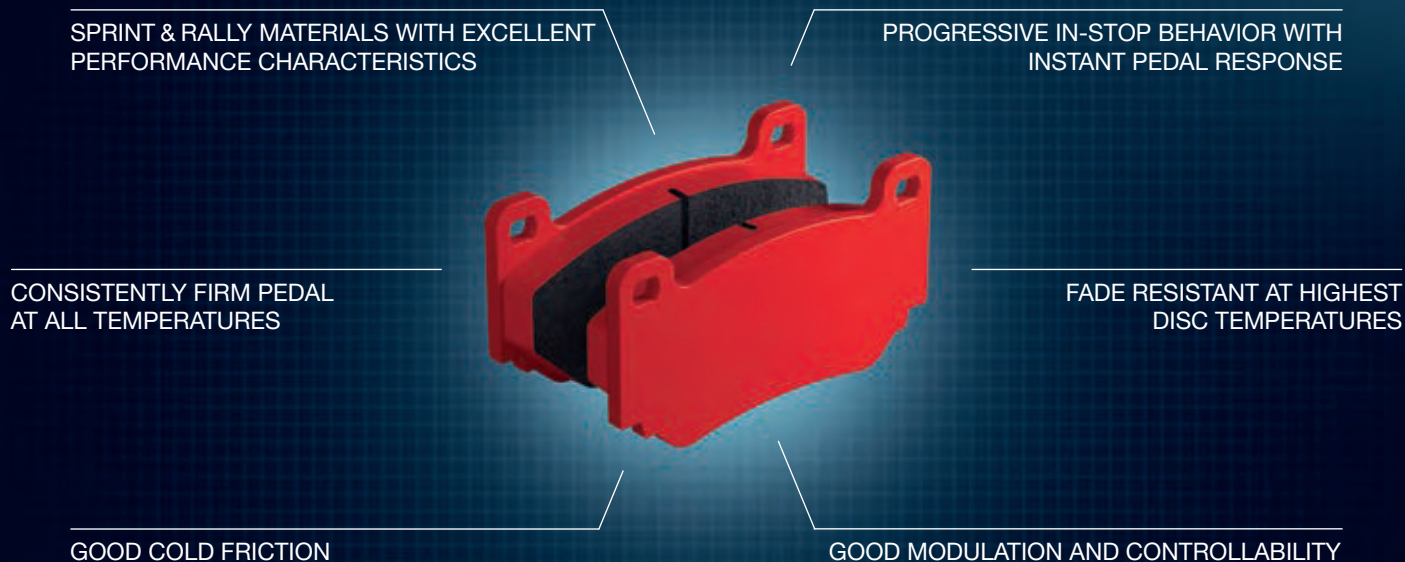

APPLICATION RANGE

Especially for race cars with high aerodynamic downforce level - with a wide brake balance range.

DESCRIPTION

Specifically developed for rear axle applications. The compounds are compatible, providing benefits in terms of vehicle stability during the turn-in stage and unloading the front axle regarding pad wear.

AVAILABLE RST RACING BRAKE PAD COMPOUNDS

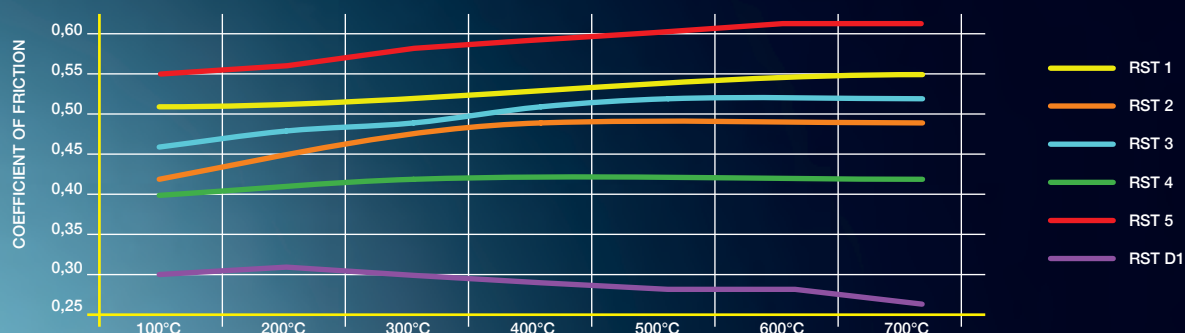

RST 1	RST 2	RST 3	RST 4	RST 5	RST D1
-------	-------	-------	-------	-------	--------

The available specifications can be found in our detailed product listings from page 85. PAGID Racing RST compounds are developed to comply with the latest requirements for rally, sprint and stock car racing. They meet or surpass all current ecological standards of the automotive industry.

BEDDING IN SERVICE

You can also acquire our Racing Brake Pads 'ready to race', perfectly bedded in on our computer system. Further information can also be found on page 40. Please ask your dealer about our 'Bedding In Service'.

FRICTION vs. TEMPERATURE RST

+ VERY HIGH FRICTION COEFFICIENT

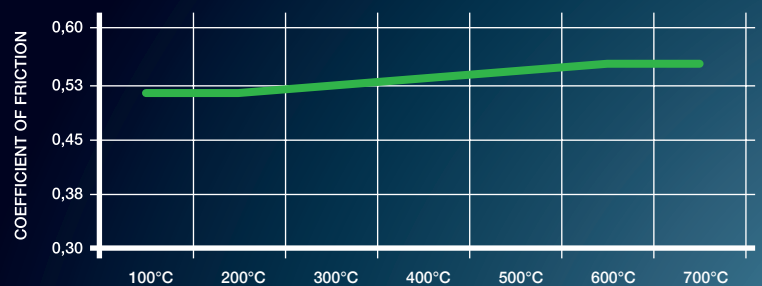

+ HIGH INITIAL BITE

+ PROGRESSIVE TORQUE CURVE

+ VERY FADE RESISTANT

FRICION vs. TEMPERATURE RST 1

APPLICATION RANGE

Rally tarmac, GT cars and Touring cars circuit racing (sprint), high down-force formula cars, NASCAR. Suitable for applications in heavy cars and where high torque is necessary against small diameter rotors.

DESCRIPTION

RST 1 has a very high friction level and high temperature resistance. It is a semi metallic resin bonded material containing steel fibers. Cold friction and initial bite makes this material most appropriate for Rally and NASCAR applications.

+ MEDIUM HIGH FRICTION COEFFICIENT

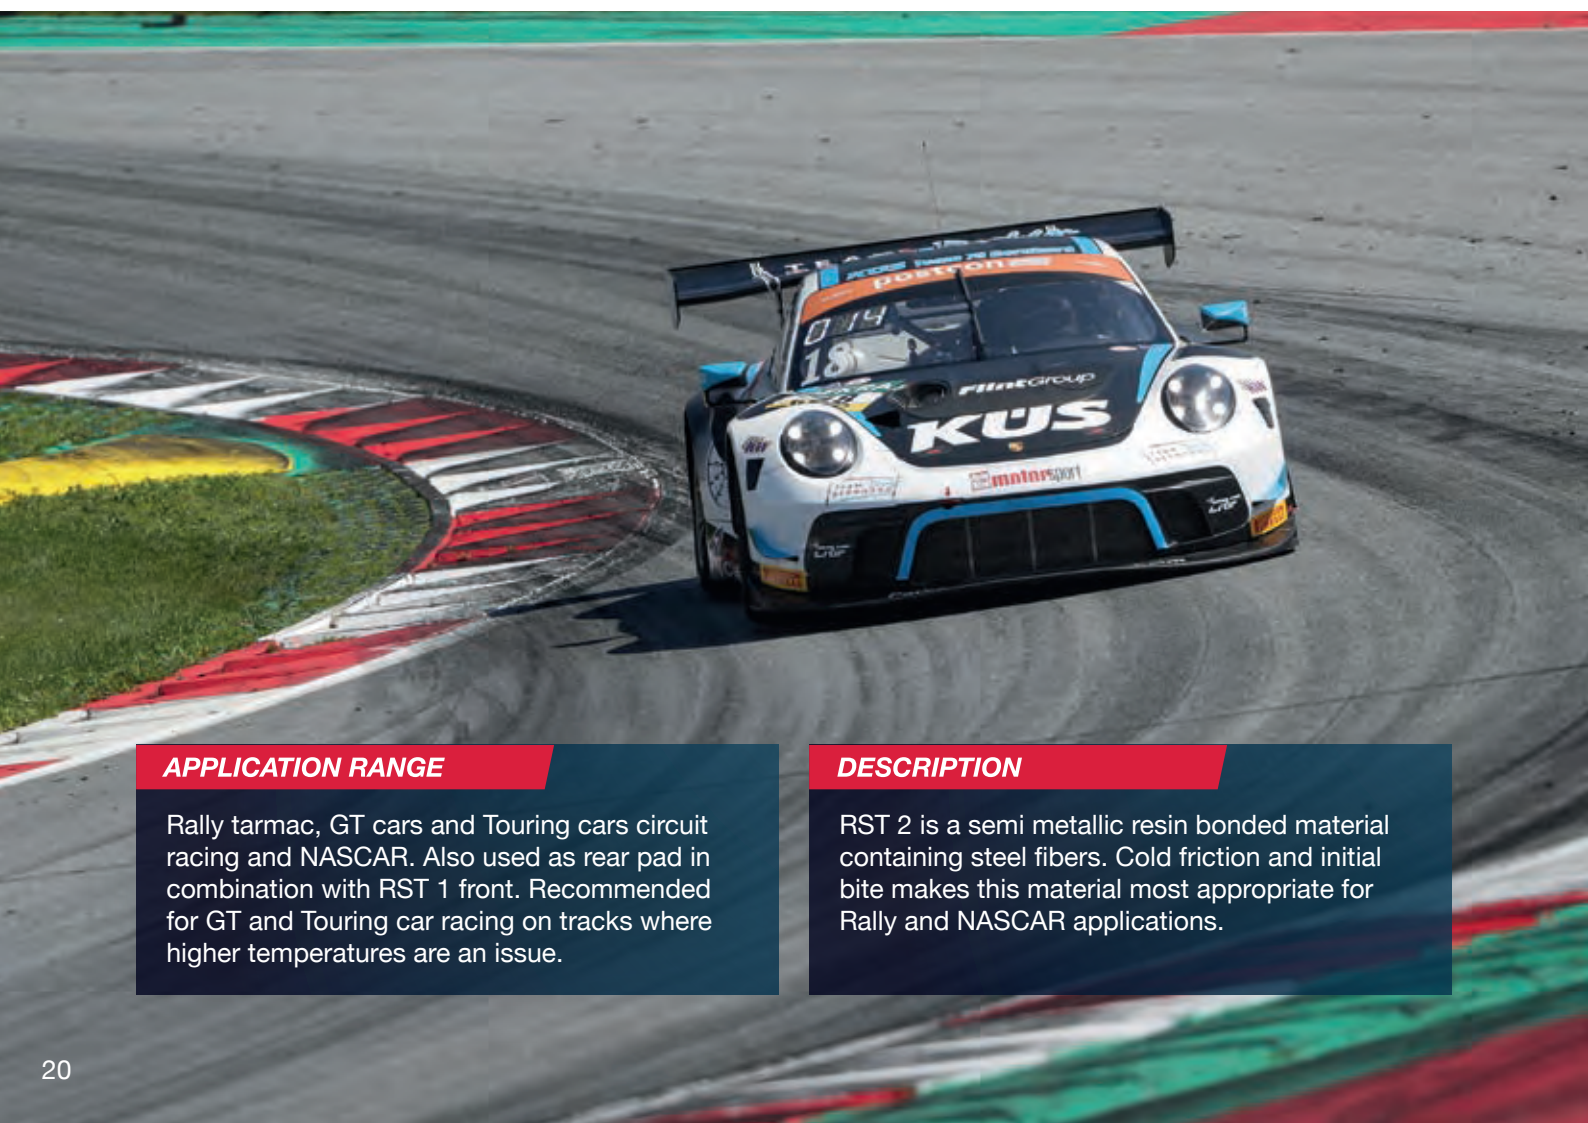

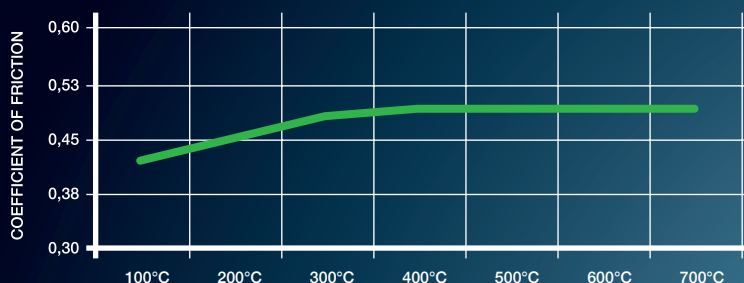

+ GOOD INITIAL BITE

+ MILD PROGRESSIVE TORQUE CURVE

+ GOOD PEDAL FEEL

FRICTION vs. TEMPERATURE RST 2

APPLICATION RANGE

Rally tarmac, GT cars and Touring cars circuit racing and NASCAR. Also used as rear pad in combination with RST 1 front. Recommended for GT and Touring car racing on tracks where higher temperatures are an issue.

DESCRIPTION

RST 2 is a semi metallic resin bonded material containing steel fibers. Cold friction and initial bite makes this material most appropriate for Rally and NASCAR applications.

+ HIGH FRICTION COEFFICIENT

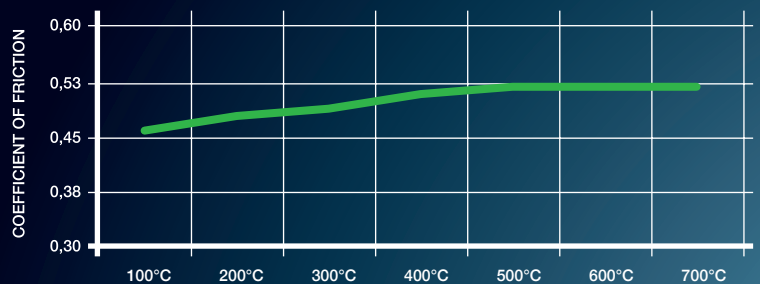

+ GOOD INITIAL BITE

+ LOW HEAT CONDUCTIVITY

**+ EXCELLENT MODULATION
AND RELEASE CHARACTERISTICS**

FRICION vs. TEMPERATURE RST 3

APPLICATION RANGE

Rally tarmac and gravel, GT cars, Touring cars and prototype circuit racing, formula cars and club racing. Wide range of applications due to its combination of bite, friction and controllability.

DESCRIPTION

RST 3 is a medium-high friction metal-ceramic compound containing steel fibers and is therefore the perfect complement of the RST product family. It captivates by its low heat conductivity.

+ MEDIUM FRICTION COEFFICIENT

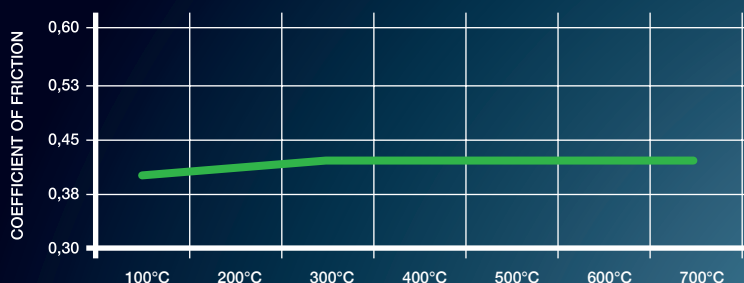

+ GOOD INITIAL BITE

+ MILD PROGRESSIVE TORQUE CURVE

+ HIGH HEAT TOLERANCE WITH CONSISTENT FEEL

FRICION vs. TEMPERATURE RST 4

APPLICATION RANGE

Formula cars and open wheel racing. Rear axle material for Rally (tarmac and gravel) and for all front engine cars. Also used in NASCAR on long ovals.

DESCRIPTION

RST 4 is a semi metallic resin bonded material containing steel fibers. This material has a medium friction level and high temperature resistance.

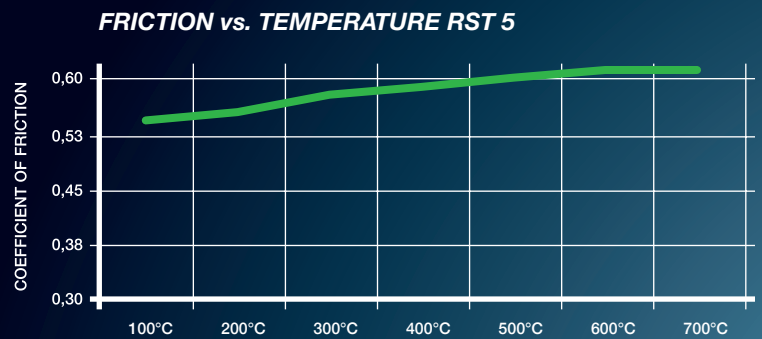

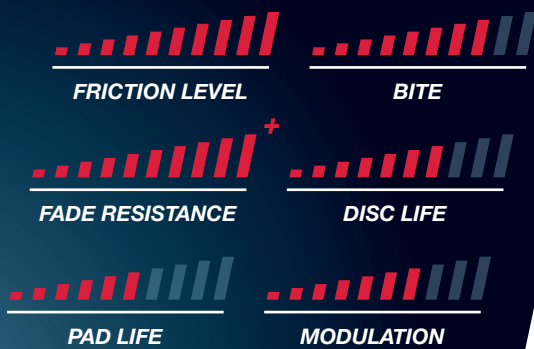

+ OPTIMUM THERMAL MANAGEMENT

+ HIGHLY FLUID FADE RESISTANT

**+ HIGHLY DEVELOPED
RECOVERY PROPERTIES**

**+ EXTREMELY HIGH
FRICTION COEFFICIENT**

APPLICATION RANGE

Specifically designed and developed for rally racing. Comes in a variety of established pad shapes in rally sports, especially in WRC and Group R.

DESCRIPTION

The optimized thermal management provides ideal performance from low temperatures to extremely high temperature conditions. The generated heat stays in the brake pad and does not move into the brake fluid. With its high initial bite and generally high friction level the RST 5 perfectly manages the balance between high aggression and prevention of wheel spin, providing the driver with a feeling of reliability and outstanding performance.

+ REAR AXLE COMPOUND

+ DISTINCTIVE DIGRESSIVE INSTOP BEHAVIOUR

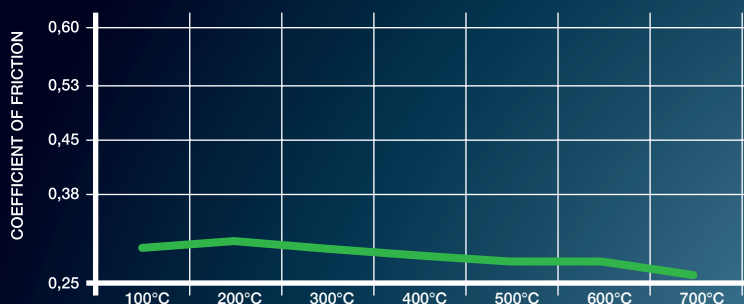

+ PRECISE MODULATION AND RELEASE CHARACTERISTICS

+ LOW FRICTION LEVEL

+ GOOD PEDAL FEEL

FRICTION vs. TEMPERATURE RST D1

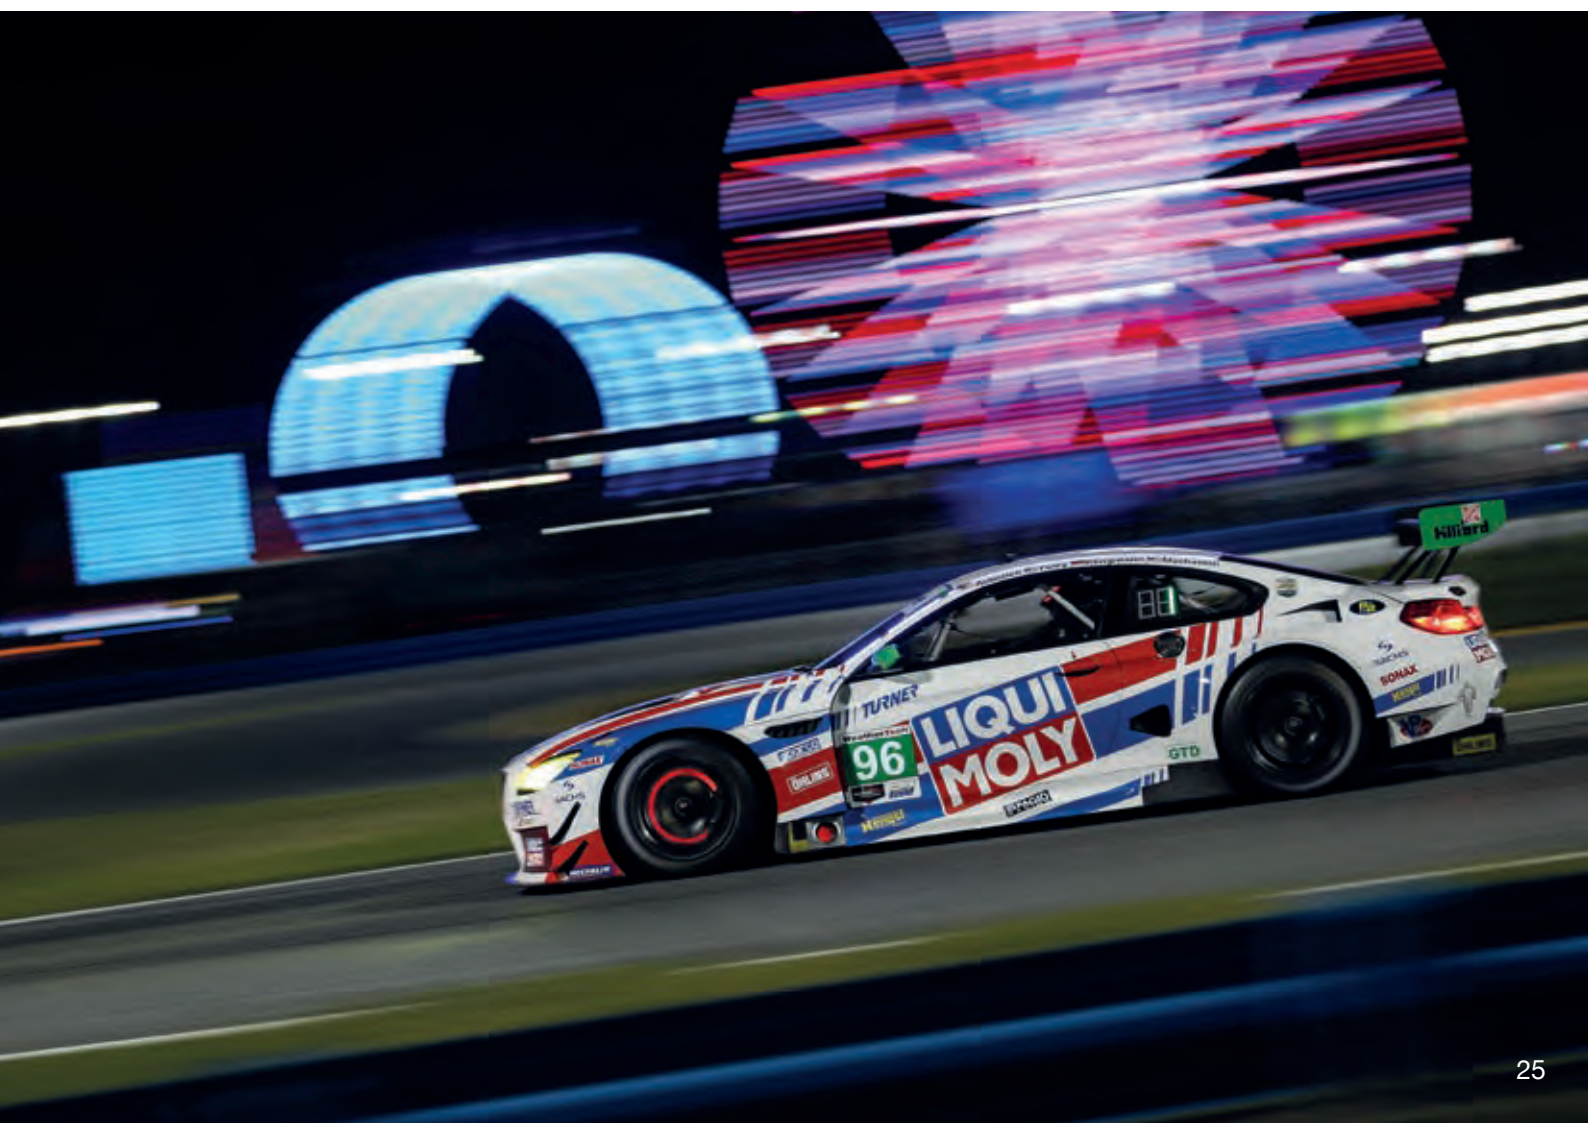

APPLICATION RANGE

Especially for race cars with high aerodynamic downforce level - with a wide brake balance range.

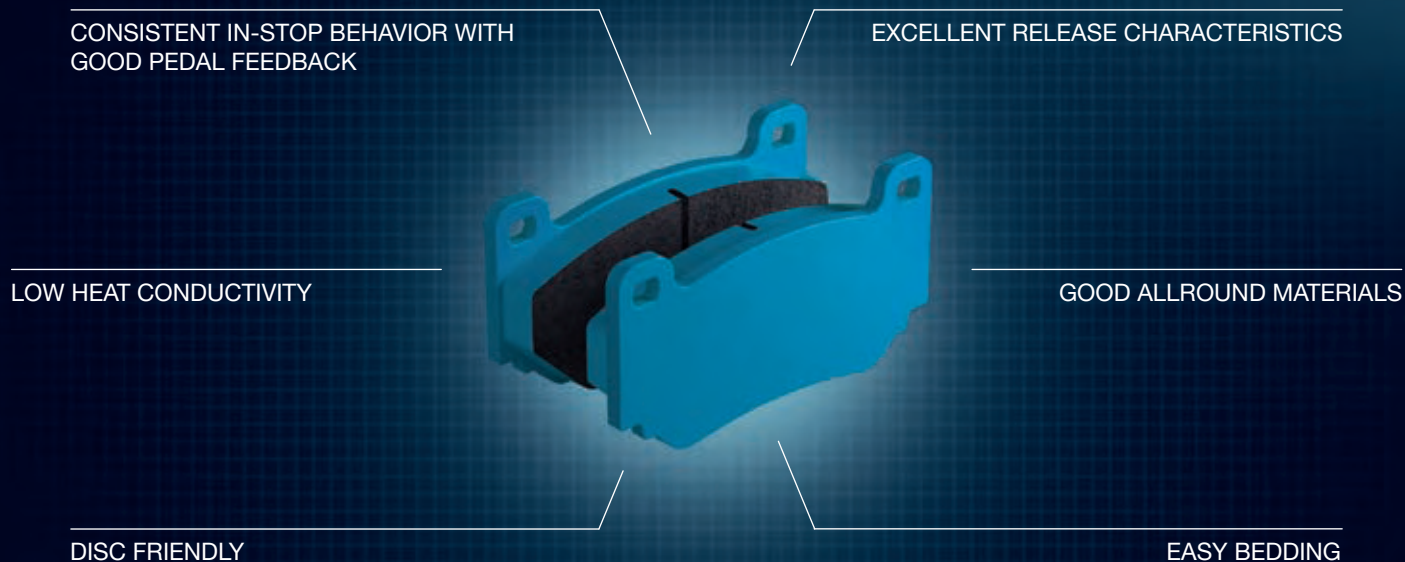

DESCRIPTION

Specifically developed for rear axle applications. The compounds are compatible, providing benefits in terms of vehicle stability during the turn-in stage and unloading the front axle regarding pad wear.

ALLROUND RACING BRAKE PADS

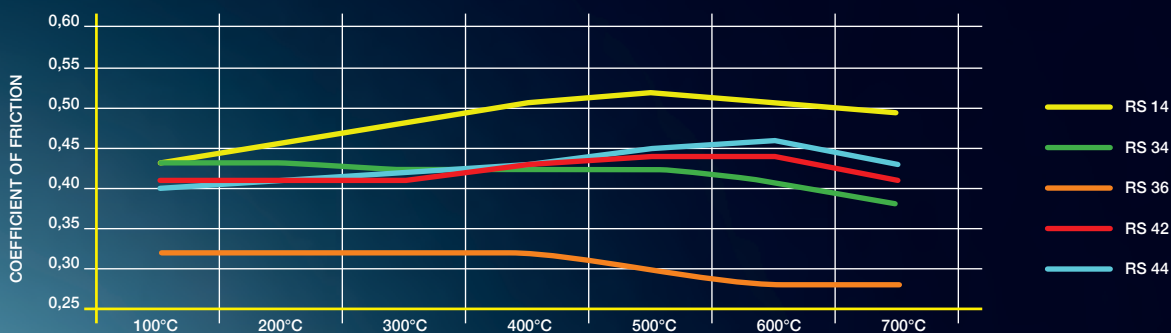

AVAILABLE RS RACING BRAKE PAD COMPOUNDS

RS 14	RS 34	RS 36	RS 42	RS 44
-------	-------	-------	-------	-------

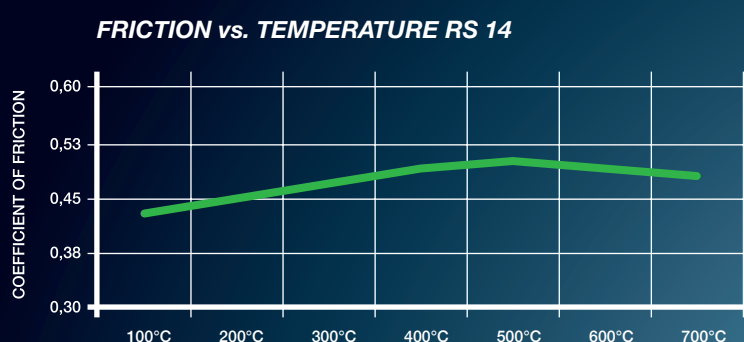

The available specifications can be found in our detailed product listings from page 85. PAGID Racing RS compounds are developed to comply with the latest requirements in racing and meet or surpass all current ecological standards of the automotive industry.

FRICTION vs. TEMPERATURE RS

- + MEDIUM HIGH FRICTION COEFFICIENT**
- + GOOD INITIAL BITE**
- + VERY GOOD MODULATION AND CONTROLLABILITY**
- + LOW WEAR RATE AND FADE RESISTANT UP TO 700°C**

APPLICATION RANGE

GT cars, Touring cars for club racing and track days.

DESCRIPTION

RS 14 features good allround characteristics for many applications. It is a low metallic resin bonded material containing steel and aramid fibers.

+ HIGH FRICTION LEVEL RANGE FOR FORMULA APPLICATION

+ QUICK INITIAL BITE

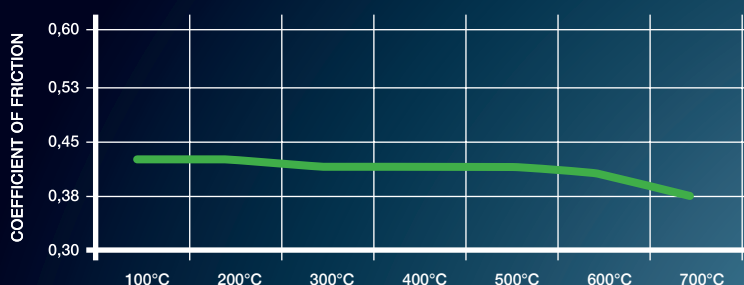

+ OPTIMIZED MODULATION

+ CONTAINED PAD WEAR

+ ENHANCED DISC LIFE

FRICTION vs. TEMPERATURE RS 34

APPLICATION RANGE

Formula cars and single seaters with cast iron brake discs.

DESCRIPTION

RS 34 is a compound specifically developed for formula cars and single seaters with a considerable level of aerodynamic downforce. Its high friction level and optimized shape of friction curve contribute to an excellent controllability with a contained pad wear, which both remain consistent characteristics.

+ MEDIUM RANGE OF FRICTION LEVEL

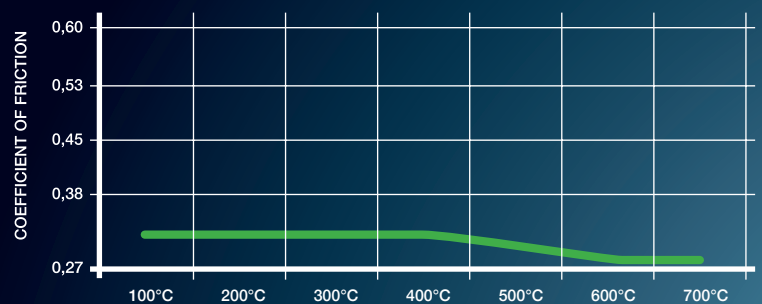

+ OPTIMIZED CONTROLLABILITY AND MODULATION CHARACTERISTICS

+ CONTAINED PAD WEAR

+ ENHANCED DISC LIFE

FRICION vs. TEMPERATURE RS 36

APPLICATION RANGE

Formula cars and single seaters with cast iron brake discs.

DESCRIPTION

RS 36 is a compound specifically developed for formula cars and single seaters with a considerable level of aerodynamic downforce. The characteristic shape of its friction curve contributes to modulation, while protecting the disc.

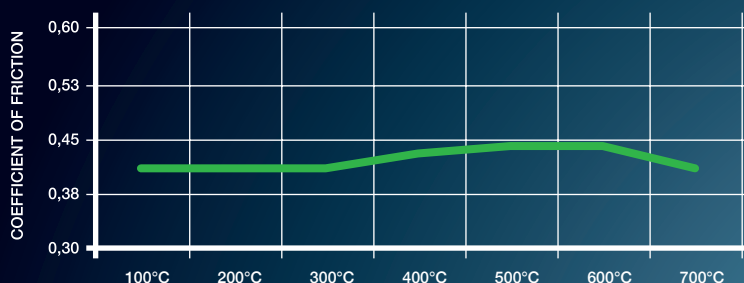

+ MEDIUM FRICTION COEFFICIENT

+ MEDIUM INITIAL BITE

+ GOOD COLD FRICTION

FRICION vs. TEMPERATURE RS 42

APPLICATION RANGE

Classic rally pad and also very popular in small formula and Touring cars.

DESCRIPTION

RS 42 is a low metallic resin bonded material containing steel and aramid fibers. The characteristics make this material appropriate for small formula cars.

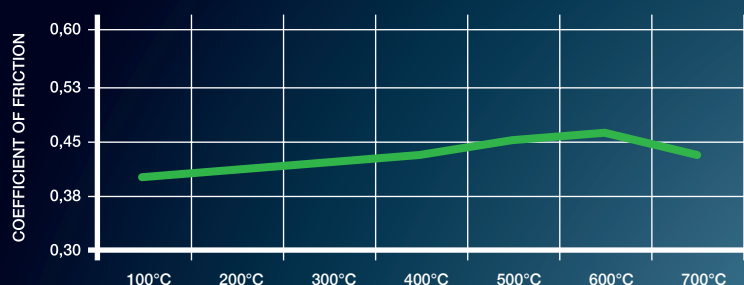

+ MEDIUM FRICTION COEFFICIENT

+ MEDIUM INITIAL BITE

+ EXCELLENT MODULATION

FRICION vs. TEMPERATURE RS 44

APPLICATION RANGE

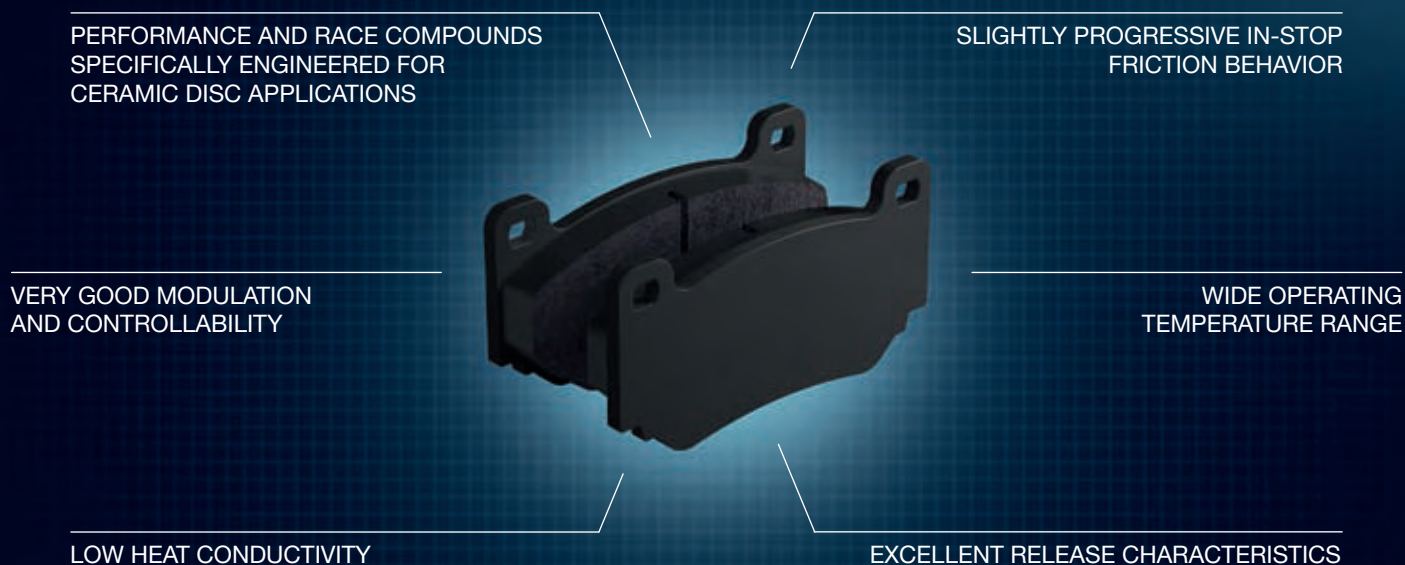

Very good rear axle pad for all front engine cars.
Very popular club racing compound.

DESCRIPTION

RS 44 works for formula cars all the way up to lighter passenger cars. It is a low metallic resin bonded material containing steel and aramid fibers. The smooth progression of friction from cold to hot makes this material easy to work with.

RACING BRAKE PADS FOR CERAMIC COMPOSITE DISCS

AVAILABLE RSC RACING BRAKE PAD COMPOUNDS

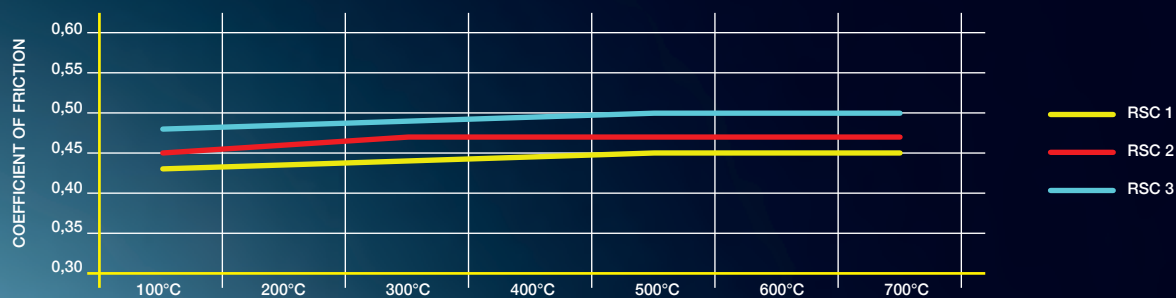

RSC 1	RSC 2	RSC 3
-------	-------	-------

Amazing track day and club sport material for a wide application range of performance cars.

The available specifications can be found in our detailed product listings from page 85.

PAGID Racing RSC compounds are developed to comply with the latest requirements in ceramic composite brake disc technology and meet or surpass all current ecological standards in the automotive industry.

FRICTION vs. TEMPERATURE RSC

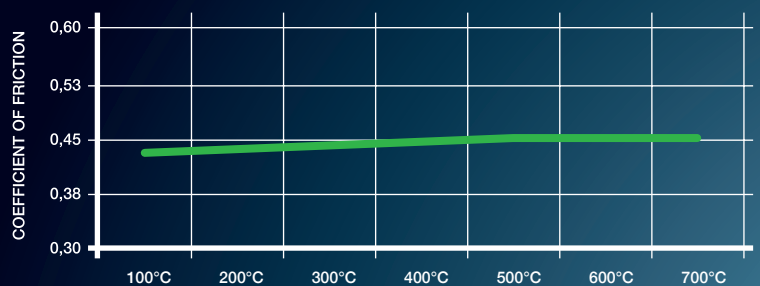

+ MEDIUM FRICTION COEFFICIENT

**+ GOOD ALLROUND
PERFORMANCE CHARACTERISTICS**

+ DISC FRIENDLY

FRICTION vs. TEMPERATURE RSC 1

APPLICATION RANGE

Race and track day compound for all known types of ceramic brake discs.

DESCRIPTION

RSC 1 is a low metallic resin bonded material containing steel and aramid fibers. This material features good all-round characteristics and is suitable for all types of usage.

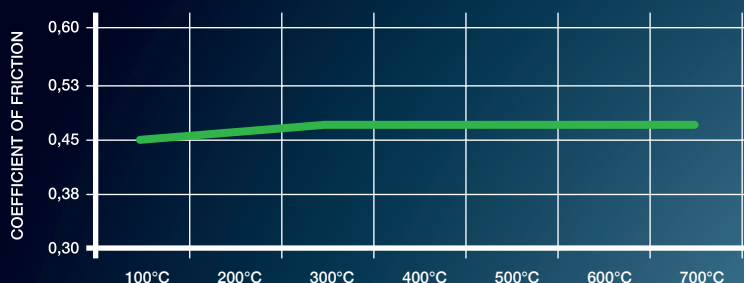

+ MEDIUM HIGH FRICTION COEFFICIENT

+ EXCELLENT FADE RESISTANCE

+ LONG PAD LIFE

FRICTION vs. TEMPERATURE RSC 2

APPLICATION RANGE

Special race compound for ceramic discs with a high content of fibers in the friction surface for sprint and endurance circuit racing.

DESCRIPTION

RSC 2 is a low metallic resin bonded material containing steel and aramid fibers. This material is specifically developed for above mentioned applications.

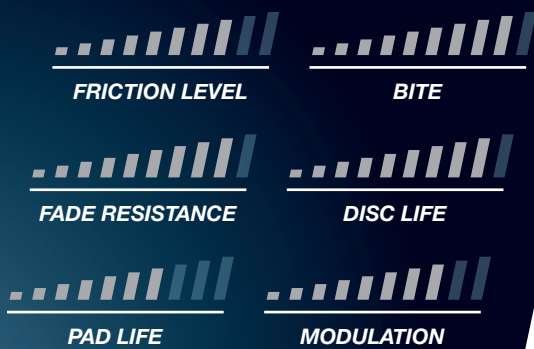

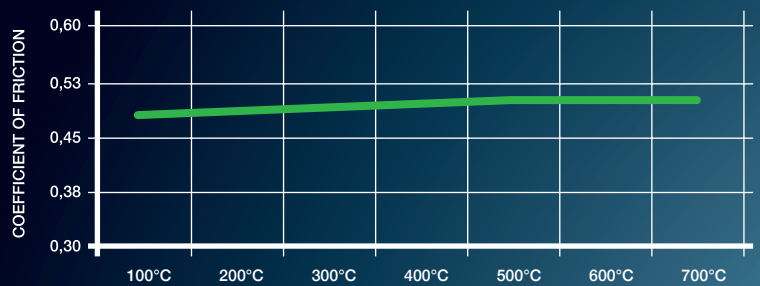

+ HIGH FRICTION COEFFICIENT

+ EXCELLENT FADE RESISTANCE

+ LONG PAD LIFE

FRICTION vs. TEMPERATURE RSC 3

APPLICATION RANGE

Special race compound for ceramic discs with low content of fibers in the friction surface for sprint and endurance circuit racing.

DESCRIPTION

RSC 3 is a low metallic resin bonded material containing steel fibers. This material is specifically developed for above mentioned applications.

RACING BRAKE PADS FOR HISTORIC CARS

AVAILABLE RSH RACING BRAKE PAD COMPOUNDS

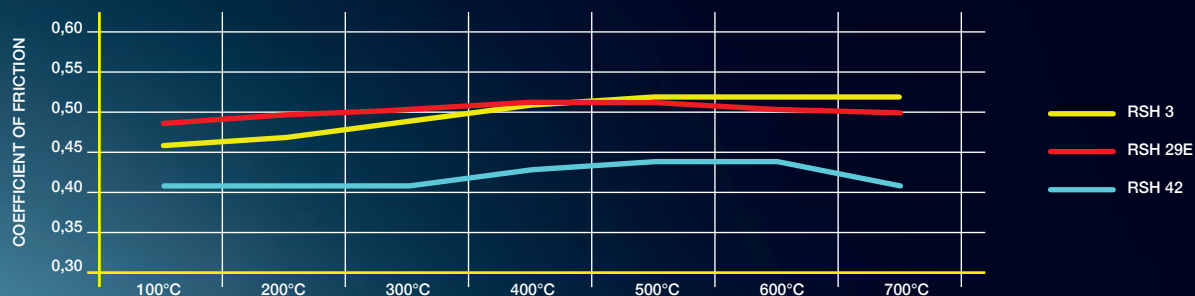

RSH 3

RSH 29E

RSH 42

The available specifications can be found in our detailed product listings from page 85. PAGID Racing RSH compounds are developed to comply with the latest requirements in historic racing and meet or surpass all current ecological standards of the automotive industry. Available model years in the extensive application range starts in the late 50s and goes up to the 90s.

FRICTION vs. TEMPERATURE RSH

+ HIGH FRICTION COEFFICIENT

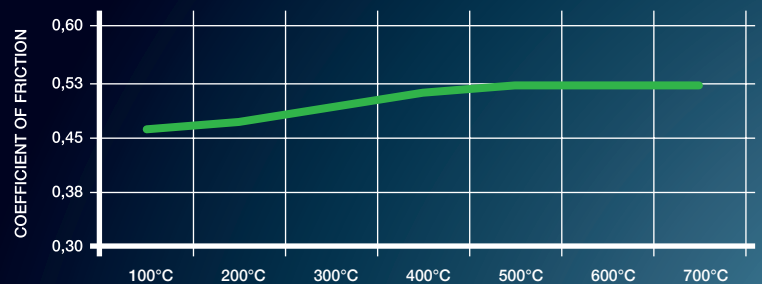

+ LOW THERMAL CONDUCTIVITY

+ FADE RESISTANT UP TO 800°C

+ CONSISTENTLY FIRM PEDAL AT ALL TEMPERATURES

FRICITION vs. TEMPERATURE RSH 3

APPLICATION RANGE

Useable for Rally, GT and Touring cars for circuit racing and also for club racing.

DESCRIPTION

The RSH 3 is an organic compound optimized for sprint races with historic cars. Due to the perfect combination of the main characteristics we can offer a wide application range. It captivates with its high initial bite and excellent modulation and release characteristics.

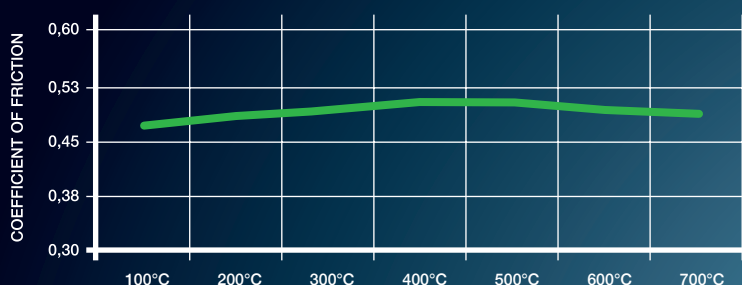

- + MEDIUM TO HIGH FRICTION COEFFICIENT
- + VERY GOOD THERMAL STABILITY
- + LOW PEDAL EFFORT
- + SLIGHTLY PROGRESSIVE IN-STOP BEHAVIOR AND GOOD MODULATION
- + LONG PAD AND DISC LIFE

FRICION vs. TEMPERATURE RSH 29E

APPLICATION RANGE

Typical purposes are GT and Touring cars in endurance races. Due to its friction level you can also use it in sprint races as well.

DESCRIPTION

The RSH 29E is excellent for endurance racing with historic cars. It convinces with its long pad and disc life and requires less pedal effort during the race. A further advantage is the constant friction level over a wide range of temperatures.

+ LOW TO MEDIUM FRICTION COEFFICIENT

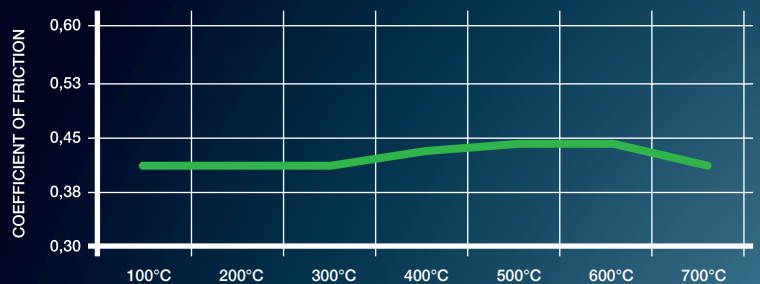

+ GOOD COLD FRICTION

+ IMMEDIATE LOW TEMPERATURE RESPONSE

+ VERY EASY BEDDING PROCESS

FRICITION vs. TEMPERATURE RSH 42

APPLICATION RANGE

An excellent classic rally pad which is also very popular in small formula cars.

DESCRIPTION

The characteristics of RSH 42 make this material appropriate for small formula cars. Furthermore, you can use it as rear axle compound in combination with the RSH 29E on the front axle.

Bedding In

Our racing brake pads are also available pre-bedded "ready to race". Please ask your local dealer for our brake pads pre-bedded.

GET THE MAXIMUM OUT OF YOUR BRAKE WITH A MINIMUM AMOUNT OF TIME WHILE SAVING BARE MONEY – GET PRE-BEDDED PARTS!

GOOD BRAKING SECURES THE WIN

Starting with optimized brake performance - well embedded professional brake pads and discs.

Good preparation and adjustment of the car is the basic requirement for any successful race. Bedding the brake components requires good concentration, experience and a lot of training time. But time is crucial, so you want to save it for other purposes.

Incorrectly bedded brakes reduce the controllability and the lifetime of the pads and discs. The maximum braking performance can only be achieved by correctly bedded brake parts.

To save time and at the end your money, we offer you to pre-bed brake pads and, if you want it, the matching brake disc.

Via a computer controlled system in a laboratory containment with the right sensory input we can precisely bed in your parts free from environmental influences like traffic, rain or a not well-trained driver.

THE 4 STAGES OF THE COMPUTER CONTROLLED BEDDING IN PROCESS

1

In the first interval the pads will be geometrically aligned. This is needed for an optimum contact patch and is managed at constant pressure and best fitting temperatures. The brakings are defined exactly with mandatory breaks.

2

In the second block it is all about heating up. Through continuous rising of temperature cracks are avoided. The brakings and breaks inbetween are run at fixed defined temperatures.

3

In the phase of highest temperatures the conditioning of the brake pads is the focus. By gasing out the initial-fading will be minimized. This process runs at very high temperatures, and there is a significant weight-loss of the complete pad.

4

In the last phase "cleaning", pads and discs are cleaned with well defined stops from remaining dirt and not usable remains from the compound.

- + MINIMUM WEIGHT
- + OPTIMIZED WEAR CHARACTERISTICS
- + CRACK RESISTANCE
- + COOLING PERFORMANCE
- + IDEAL MOUNTING BELL
- + ADAPTED TO PURPOSE APPROPRIATE NUMBERS OF GROOVES

CREATING SYNERGY DESERVES AN OPTIMIZED PARTNERSHIP

An uncompromising and highly efficient partnership between brake pad and brake disc – this was the development criteria for our PAGID Racing brake disc. Under this aspect the full characteristics were developed and set up for the intended purpose.

Strict quality controls during a long development process result in a high performance racing brake disc, optimized for weight, cooling performance and crack resistance. In conjunction with our brake pads our products create a highly efficient “brake team”.

The modular design allows in most cases the use of either the lightweight version (for sprint races or rally), or the endurance version with the same hat (bell) for the specific vehicle applications.

DESIGN FEATURES

- + Floating connection between bobbin and disc eliminates wear on the hard anodized hat and makes it reusable multiple times.
- + Airflow onto the outside friction face is achieved through the proper sized openings in the connection flange to the disc.
- + Specially designed ventilation chamber to optimize the thermal exchange rate between disc and cooling airflow.
- + The surface finish (groove pattern) has been developed in combination with PAGID Racing brake pads for best system performance and wear characteristics.

+ APPROVED IN A WIDE VEHICLE RANGE

+ LOW HYGROSCOPIC CHARACTERISTICS

+ EXTREME HIGH DRY BOILING POINT

+ HEAT STABILITY

+ EXCELLENT VISCOSITY

+ PERFECTLY USABLE FOR ABS

DESCRIPTION

One of the biggest challenges developing a brake fluid is to reach a boiling point as high as possible. PAGID Racing Brake Fluid has been specially formulated for racing applications, where brake systems consistently operate at very high temperatures.

The typical dry boiling point of 330°C (626°F) is extremely high and guarantees maximum safety against vapor lock.

PAGID Racing Brake Fluid also maintains its excellent viscosity, lubricity and compressibility performance at extreme temperatures, maintaining the brake system reliability and performance.

USAGE

- Follow vehicle manufacturers' recommendations when adding brake fluid
- Keep brake fluid clean and dry
- Store brake fluid only in its original container
- Dispose of used brake fluid responsibly

ATTENTION!

For best results bleed the system with fresh PAGID Racing brake fluid before each race, especially if the brakes are excessively hot and/or the conditions are humid.

Overview Boiling Point	Category	Information
<p>Typical Dry Boiling Point: 626 °F / 330 °C</p> <p>Typical Wet Boiling Point: 392 °F / 200 °C</p>	Size	0,5L / 16.9 fl. oz.
	ERBP Dry [°C] / [°F]	330 / 626
	ERBP Wet [°C] / [°F]	200 / 392
	Viscosity at -40 °C [cSt]	2200
	Viscosity at -100 °C [cSt]	2.31
	pH	6.90
	Fluidity [°C]	-50
	Compatibility [°C]	-40 to +60
	Colour	Straw yellow
	Water content [%]	< 0.20
	Density at 20 °C [g/ml]	1.080
	Vapour density	N.E.
	Vapour pressure at 20 °C [mBar] °C [mBar]	< 2

RACING BRAKE PADS FOR
HISTORIC CARS

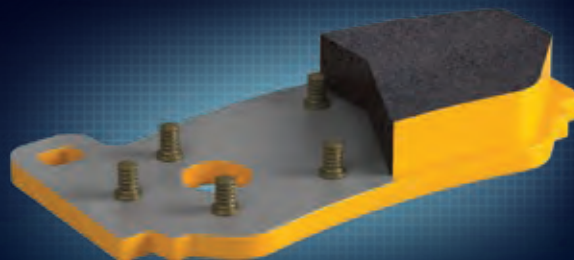

PAGID*RSH*

PAGID Racing compounds have a very high content of non-ferrous (ceramic) materials. The difference to competitor's metallic compounds is the superior thermal insulation and higher heat resistance combined with low heat conductivity, reducing heat transfer to the caliper (up to a massive 60 °C) preventing boiling of the fluid.

All PAGID Racing compounds are designed to minimize wear of the pad-rotor system, while maintaining optimum bite, brake modulation and pedal feel. All friction compounds meet or surpass all current ecological standards of the automotive industry.

PAGID RACING STEEL BACKING PLATE DESIGN

PAGID Racing employs dual retention systems, with an adhesive bond and a patented mechanical system. The mechanical system consists of brass studs that are welded directly to the backplate to ensure a positive retention between pad compound and the backplate. These brass studs are softer than the brake disc (rotor) and wear away as the pad is consumed causing no damage to the disc.

+ UNIQUE AND PATENTED SYSTEM

+ FRICTION MATERIAL IS FIXED TO THE BACKPLATE

+ NO DELAMINATION FROM THE STEEL BACKING PLATE

+ HIGH TECH AND INNOVATION FOR YOUR VEHICLE

BEDDING

WHY BEDDING?

To align the pad surface with the brake disc (rotor) surface and ensure full contact.

To transfer a layer of friction material onto the brake disc (rotor) faces to achieve maximum performance.

To burn out the volatile elements in the friction compound in order to have the initial (green) fade occur during bedding and not during the race.

If pads are not bedded properly according to the above mentioned sequence, the brake system will not achieve its maximum friction performance, wear behavior and pedal feel. Improper bedding can also lead to judder and vibration. Unlike discs, pads do not require cooling down post-bedding for optimal performance/longevity.

RECOMMENDED ON-VEHICLE BEDDING IN PROCEDURE

1 **Breaking-in**

Creating a perfect contact-pattern between rotor and brake pad surface

10 stops with low pressure and low temperature from 150 km/h (90 MPH) to approximately 80 km/h (50 MPH).

Distance between each brake stop approximately 600 – 800 meters (600 to 800 yards).

2 **Heating-up**

Warm up in order to initiate some core heat in the whole brake system

A sequence of 5 stops with medium to high pressure from 180 km/h (112 MPH) to approximately 60 km/h (37 MPH) with maximum acceleration between the stops.

After the last stop cool down for 3 minutes with the speed preferably not higher than 100 km/h (62 MPH).

3 **Recovery Stops**

3 to 5 stops with low pressure from 150 km/h (90 MPH) to approximately 80 km/h (50 MPH).

Distance between each brake stop approximately 600 – 800 meters (600 to 800 yards).

BEDDING IN SERVICE – USAGE OF PRE-BEDDED PARTS

GET THE MAXIMUM OUT OF YOUR BRAKE WITH A MINIMUM AMOUNT OF TIME WHILE SAVING BARE MONEY – GET PRE-BEDDED PARTS!

Our racing brake pads are also available pre-bedded “ready to race”. Further information can be also found on page 40. Please ask your local dealer for our brake pads pre-bedded.

Using pre-bedded parts is always recommended, as they are run in a computer-controlled environment and can therefore deliver perfect performance for a very reasonable cost. Keep in mind every kilometer driving a race car is expensive!

Tips

AVOIDING BRAKE JUDDER

Brake judder is caused by an uneven buildup of pad material on the friction surface of the disc. This can occur with improper or incomplete bed-in, or when changing between incompatible pad materials on the same disc. During bed-in some judder can occur for the first 5 to 10 laps or until the discs and pads are sufficiently warmed and can vary from a barely noticeable vibration to a violent shake.

Uneven pad transfer can also be caused by Imprinting, which is staying too long on the pedal when the car is standing still, but the brakes are hot. Small particles of the friction material can bond into the disc surface, or potentially pull the transferred layer out of the disc surface.

BIGGER VS. SMALLER PAD

A bigger pad doesn't mean a bigger stopping power, but the greater heat capacity of the larger pad can improve modulation, wear rate and lead to more consistent performance.

PAD FADE VS. BRAKE FLUID FADE

Pad fade

If the temperature between pad and disc gets too high, the pad starts gasses out, building up an air cushion between pad and disc. The pedal remains stiff, but the stopping power is reduced. Solutions are an improved cooling, change to a higher temp range pad material or a higher mass brake disc.

Fluid fade

If there is too much energy being transferred to the caliper and fluid, it can boil the fluid. These gas bubbles being compressible, the pedal travel increases and becomes "spongy" with poor modulation. (This is a gradual process with advanced warning). Solutions include: Changing brake fluid to one with a higher boiling point, using a different pad compound with better heat transfer properties, or improving the cooling to prevent the fluid from boiling.

The importance of keeping fresh brake fluid in the system and regular bleeding cannot be overstressed.

WATCH THE TEMPS!

We recommend monitoring the peak brake disc temps with a thermal paint kit, the most common of which is the 3 color (Green, Orange, Red) system.

Ideally, the green paint (430°C / 806°F) should be completely oxidized (turns white), the orange paint (560°C / 1040°F) should be symmetrically beginning to oxidize and the red paint (610°C / 1130°F) should be un-touched or change only slightly.

Caliper temps can be monitored with temperature strips to assist with pinpointing heat-related system issues.

NEED FURTHER TIPS AND INFORMATION?

On our website www.pagidracing.com
under the section **"Information / Videos"**
or on our **YouTube channel** you can find
a variety of video tutorials, guiding you
through our product range and providing
useful tips and hacks for the correct
handling of your braking system.
